(54) Title: AN APPARATUS FOR CLEANING OF GAS

(57) Abstract: In an apparatus for cleaning of gases a centrifugal rotor (7) is supported by two bearings, in which it is rotatable about a rotational axis. The two bearings are lubricated by means of an oil mist, which is generated in a space (6), when oil is sprayed against a turbine wheel (22) supported by the rotor. Whereas the bearing (9), which is situated nearest said space (6), is lubricated by oil mist present in the space, the second bearing (8) is lubricated by oil mist being conducted to it through a central channel (11) in the centrifugal rotor.

* Special categories of cited documents:

- "A" document defining the general state of the art which is not considered to be of particular relevance
- "E" earlier application or patent but published on or after the international filing date
- "L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
- "O" document referring to an oral disclosure, use, exhibition or other means
- "P" document published prior to the international filing date but later than the priority date claimed

"T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention

"X" document of particular relevance: the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone

"Y" document of particular relevance: the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art

"&" document member of the same patent family
